Origin:

1. ~~But~~(informal conjunction use), although some researches/literatures ~~look like they see~~(informal expression) a ~~huge~~(vague expression) correlation between changes in morphology and postural and locomotor traits in birds, ~~while~~(grammar problem) researchers from all over the world ~~didn't get any~~(informal expression:contractions+lazy verb) direct experimental evidence for that until now.

Improved:

However, although some researches/literatures suggest a strong correlation between changes in morphology and postural and locomotor traits in birds, no direct experimental evidence has yet been found.

Origin:

2. ~~Actually~~, only one experimental study, to the knowledge of all of us, has ~~tried really hard~~(informal expression) to ~~figure out~~(phrasal verb) ~~about~~(incorrect preposition use) the relationship between CoM and postural and kinematic changes in birds.

Improved:

In fact, only one experimental study, to the knowledge of all of us, has attempted to examine the relationship between CoM and postural and kinematic changes in birds.

Origin:

3. In an integrative analysis of posture, limb kinematics, bone loading patterns ~~and so on~~(run-on expression), Carrano and Biewener ~~stuck~~(improper expression) artificial tails to chickens.

4. ~~In that way~~, (informal expression, giving no info) the CoM went a bit more caudally.

5. ~~Doing this~~, (informal expression, giving no info) they hoped to ~~kind of~~(informal, implying an unconfident writing) imitate theropod-like limb posture, locomotion ~~and other such things~~(run-on expression).

Improved:

In an integrative analysis of posture, limb kinematics, bone loading patterns, Carrano and Biewener attached artificial tails to chickens, thus moving the CoM a bit more caudally, hoping to imitate theropod-like limb posture and locomotion.

Origin:

6. ~~Amazingly~~(informal expression, improper implication considering following "unexpected results"), their study got totally unexpected results: birds ~~with tails stuck to them~~(stuck:improper expression;with...:can be more economic) ~~had~~(informal expression:lazy verb) even more horizontally oriented femora.

7. ~~Though~~(Grammar problem) they ~~didn't get~~(informal expression:Contractions+lazy verb) qualitative changes in kinematics during locomotion compared to chickens ~~that hadn't been manipulated~~(can be more economic).

Improved:

However, their study got totally unexpected results: birds with attached tails display even more horizontally oriented femora, while no qualitative changes in kinematics were found during locomotion compared to non-manipulated chickens.
